Jonathan Kim

Full Stack Software Developer

Jonathankim829@gmail.com | (909) 657-6129 | https://github.com/ScoobyXD

Education

Master of Science - Embedded Systems **Sept. 2025 - Mar. 2026**
University of California, Irvine **Irvine, California**
GPA: (4.0/4.0)

Bachelor of Science - Management Information Systems **Sept. 2018 - June 2022**
Santa Clara University **Santa Clara, California**

Professional Experience

Full Stack Software Developer **Mar. 2026 - Sept. 2026**
180 Snacks **Fullerton, California**

- Built from scratch an enterprise operations platform for a 50 person company with $70M in annual revenue, using React, TypeScript, Go, and PostgreSQL.
- Worked side by side with employees to understand operational workflows, translate feedback into product requirements, and iteratively deliver features and usability improvements.
- Provisioned AWS infrastructure with Terraform and built GitHub Actions CI/CD pipelines to deploy Docker containers to ECS Fargate and the frontend to S3/CloudFront.
- Built shared email inboxes, interactive process maps, and timeline-based documents that connect team communication, workflows, and work history.

Full Stack Software Developer **Jan. 2023 - Oct. 2024**
Leidos QTC Health Services **San Dimas, California**

- Developed and maintained .NET enterprise applications vital to the business's core revenue stream, contributing to revenue growth from $500 million to over $1 billion annually. As a member of the team responsible for core user-facing applications, I ensured seamless functionality during this period of rapid expansion.
- Developed a robust backend using C#, frontend in JavaScript/jQuery, enhancing user experience for scheduling medical appointments.
- Integrated a PDF compression service, significantly improving document processing speeds and resolving critical business bottlenecks.
- Developed 50% of the code for a feature that digitized labor-intensive medical paperwork, previously done manually. This improvement has enhanced the efficiency of care delivery for tens of thousands of veterans.

Projects

CTRL Loop **Sept 2026**

- Built a full-stack computer automation platform with Python, FastAPI, and PostgreSQL, supporting company accounts, reusable workflows, and with Linux VMs.
- Developed an AI agent that uses Jev and native accessibility data to select windows, identify controls, and execute desktop actions.
- Engineered adaptive inference batching and multiround candidate selection, with automatic recovery from token limits while preserving completed results.
- Implemented detailed execution tracing with stage timings, model probabilities, token costs, screenshots, and downloadable evidence to diagnose agent behavior and performance.

Technologies & Languages

AWS, Terraform, GitHub Actions, Linux, PostgreSQL, Go, TypeScript, JavaScript, Python, C#, C/C++, SQL
